**NTX series ONTs** are high performance multifunctional subscriber terminals designed to access modern telephony, IPTV, OTT and Internet services.

#### PON technology

XGS-PON technology is one of the most modern and efficient last mile problem solutions. The technology helps to reduce costs for cable infrastructure and providing data rates of up to 10 Gbps in downlink and 10 Gbps in uplink direction. The use of XGS-PON technology in access networks allows providing end users with access to IP-based services.

#### Universal devices

The integrated router with four 1G ports and one 10G port ensures high-speed connection of network devices. The FXS port enables access to VoIP services. The USB port can be used for USB devices (USB flash drive, external HDD, printer).

#### Provided services

- High-speed access to the Internet
- Video streaming/High Definition TV/IPTV, video on demand (VoD), video conferences
- VoIP<sup>1</sup>
- Online entertainment and educational programmes
- Smart home system management

#### Smart home controller<sup>2</sup>

The device includes a Smart home controller that supports Z-Wave radio communication with sensors and devices.

#### Advantages of EasyMesh technology

- Network intelligence: a self-organizing and self-optimizing network collects information and responds to network conditions for maximum performance
- Efficient load balancing: allows devices to switch to a better connection and avoid interference
- Scalability: allows adding multi-vendor Wi-Fi EasyMesh access points

#### Application

- Providing broadband access services to subscribers in apartment blocks, residential estates, campuses and suburban settlements
- Building corporate networks in large strategic enterprises and in business centers with high requirements to security and data transfer rates

#### Wireless connection

NTX-RG-5520-Wax, NTX-RG-5520-Wax-Z and NTX-RG-5521-Wax subscriber terminals support the 802.11ax standard that provides data rates up to 2400 Mbps and delivers modern high-speed services to subscriber equipment via the wireless network.

Two integrated Wi-Fi controllers ensure simultaneous dual-band operation in 2.4 GHz and 5 GHz.
