

- Single point of network access control
- Policy-based security
- Compliance with information security requirements
- Flexible integration with existing infrastructure

Network Access and Information Control Engine

Eltex-NAICE (Network Access and Information Control Engine) is a system for managing access to enterprise network resources. The solution is designed for centralized management of user access policies for wired and wireless networks and network equipment. The system is managed through a modern web interface.

NAICE is a multi-vendor solution that supports interaction via the RADIUS and TACACS+ protocols.

Features and capabilities

Access management

- Centralized access policy management
- Customer segmentation by attributes
- Profiling by MAC-OUI or DHCP probes
- Logging of access events
- Role-based access control model

Authentication and authorization

- Support for network user authentication via 802.1X (EAP-PEAP, EAP-TLS, PAP, MS-CHAPv2)
- Access control for network equipment via TACACS+
- Captive Portal authentication support: SMS registration, authorization using a local database, MS AD, LDAP
- MAC Authentication Bypass (MAB)

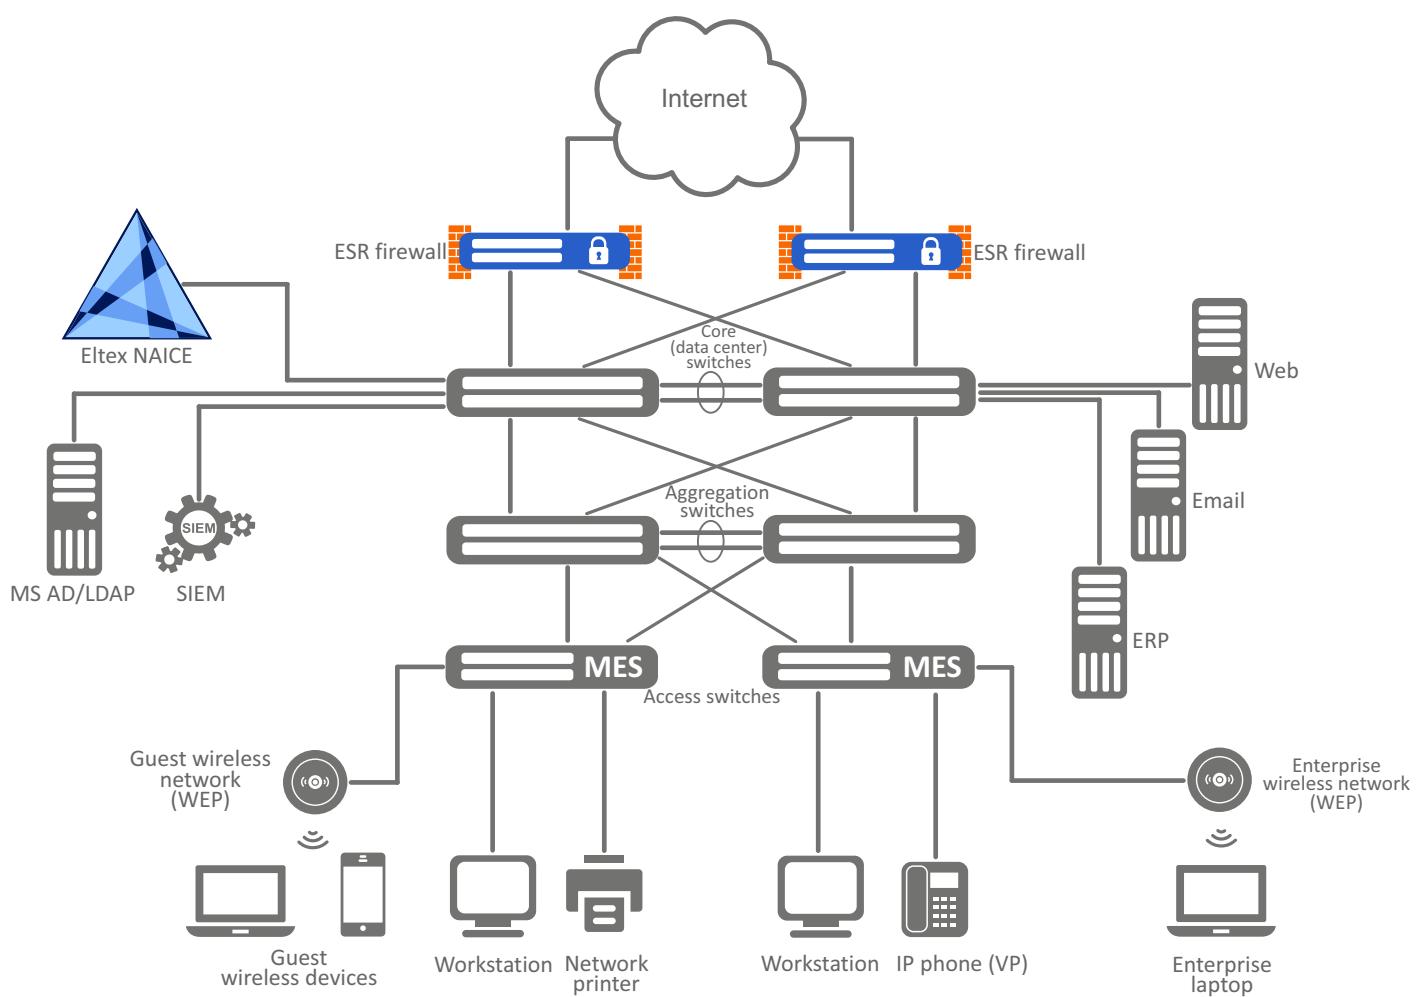

Integration capabilities

- Support for external data sources, including MS Active Directory and LDAP, for authentication of network users, portal-based guest users, and network administrators
- Support for sending network user authentication and authorization events (RADIUS), network administrator events (TACACS+), NAICE administrator actions, and other system events to external SIEM platforms or log collectors. Transmission is performed over UDP/TCP in CEF (Common Event Format) with the ability to select which events are sent.

Technical features

- Support for Ubuntu 22.04 LTS, Astra Linux 1.7/1.8, RedOS 7.3/8.0
- Active-Active redundancy scheme
- Support for licensing via a license server (online or in an isolated network) and file-based licensing tied to hardware characteristics
- Access to an unlimited demo mode without obtaining a license
